

Von Newman website update

11 September 2026

Here is a quick summary of the work completed on the Von Newman website so far.

We redesigned the website to present Von Newman more clearly as a technology consultancy and engineering company with products, practical experience and operations in Nigeria and the UK. The overall design is now more human, modern and visually engaging, while still feeling suitable for enterprise and public-sector clients.

- Reduced the oversized fonts across the website and introduced a cleaner geometric heading style.
- Improved the navigation, buttons, arrow icons, spacing, colours, animations and mobile layout.
- Updated the homepage hero, consulting services, sectors, products, company information, team, locations, FAQ and contact sections.
- Added more relevant human-centred imagery and removed repeated or unsuitable visuals.
- Improved the location section for Lagos, Abuja, Calabar and London, with one Nigeria clock and one UK clock.
- Updated the team section with better portrait cards and clearer names and roles.
- Improved the Atlas and Sonar product sections and used the latest supplied CMS, LMS and Sonar images throughout the website.
- Created an automatic selected-work carousel for Atlas CMS, Atlas LMS, Sonar, Compass and HR performance systems.
- Added a dedicated case-study page to the main navigation.
- Created five individual case studies covering Atlas CMS, Atlas LMS, Sonar, Compass and HR performance systems.
- Added the latest Atlas CMS and LMS interface screenshots to their case-study evidence sections.
- Redesigned the case-study landing hero, made every case-study card fully clickable and improved the capability cards inside each product case study.

The website currently has a complete homepage, a case-study landing page and five working product case-study pages. The desktop and mobile layouts have been checked, the routes work without requiring a refresh, and the latest production build, TypeScript check and ESLint check all pass.
